Hi Teri,

Sorry it's taken me a while to get back to you on this submittal. I had our statistician look over the Mann-Kendall work that was presented in the report.

He has voiced some concerns with relying on the existing 12 data points to determine the trends due to high variability in the data and recommended that monitoring continue at wells IA 1-OW-1 and IA1-OW-5. Monitoring of IA1-OW-4 can be terminated due to it being consistently below appropriate action levels.

We are available to discuss if you'd like, however, I am on travel until June 10th. I will have access to email.

Thanks,
Peter
